# ASP.NET programming

**ASP.NET AJAX** 

## **ASP.NET AJAX Overview**

- Free <u>Microsoft AJAX framework</u> for building highly interactive and responsive web applications that work <u>across all popular browsers</u>
- Enables the creation of Web pages that include a <u>rich</u> <u>user experience</u> with responsive and familiar UI elements
- Gives <u>improved efficiency</u>, because <u>significant parts</u> of a Web page's processing are <u>performed in the browser</u>
- Lets the <u>server controls</u> to be customized to <u>include client</u> <u>capabilities</u>

## ASP.NET AJAX server-side controls

## ScriptManager

- Central to AJAX functionality, obligatory on every AJAX page
- Downloads AJAX Library scripts to the browser and coordinates partial-page updates
- Enables managing browser history in an AJAX application by updating the browser back button after an AJAX request.

### ScriptManagerProxy

 Enables nested components to add script and service references to pages when a ScriptManager control is already defined in a parent element

## UpdatePanel

 Enables updating a portion of a page without requiring reload of the entire page.

## UpdateProgress

 Can be used to improve the user experince by keeping user informed about the status of partial-page updates

### Timer

- Performs postbacks at defined intervals
- If used with UpdatePanel control, enables partial-page updates at defined intervals

# ASP.NET AJAX AsyncPostBackTrigger

- Used to enable controls to be triggers for an UpdatePanel control
  - Controls that are triggers for an update panel cause a refresh of the panel's content when they post back
- Is useful
  - For controls that are outside a panel to cause a panel refresh
  - For controls that are inside a panel when the ChildrenAsTriggers property is false to cause a panel refresh
  - For controls that are inside nested panels to cause a refresh of parent panels
- Two ways to add
  - By using the UpdatePanelTrigger Collection Editor dialog box in the designer
  - By creating a <Triggers> element declaratively in the UpdatePanel control

# DEMO

AJAX

## ASP.NET AJAX Control Toolkit

- Community supported project
- Freely downloadable
- Contains 40 additional AJAX controls

## Downloading and installing

- Download AJAX Control Toolkit from www.codeplex.com/AjaxControlToolkit
- To install AJAX Control Toolkit see instructions at <a href="http://www.aspnettutorials.com/tutorials/ajax/">http://www.aspnettutorials.com/tutorials/ajax/</a>

# **AJAX Summary**

## With ASP.NET AJAX the developer can

- Create next-generation interfaces with reusable AJAX components
- Enhance existing pages using powerful AJAX controls with support for all modern browsers
- Access remote services and data from the browser without tons of complicated script
- Take advantage of the improved efficiency and ease of use in <u>Visual Studio 2008</u>, with its built-in support for ASP.NET AJAX, improved JavaScript support, and a new Web page designer interface
- Exploit <u>community supported AJAX Control Toolkit</u>
