

Use-case Stories

Solution works for different users:

Consultants

Managers

Controllers

Resources

Consultants

Jane as a consultant at Capgnmini could

- logs into the system every week using his account
- view he can quickly see his workload forecast
- fill out workload forecast template.
- add/edit/remove the following components of workload forecast : name, input date,[client/customer name, project/comment, probability, billing price/h, workload percentage/week] per activity. (remove doesn't actually remove the data from db)
- select activity types from predefined list.
- update workload forecast template while other users editing the system.
- access to other consultant workload forecast.
- access the history of workload forecast.

Note: If Jane as consultant does not fill out her weekly workload forecast, she would be encouraged to fill out the missing data (Optionally the system could send email, if this weeks report is missing at end of the week).

Managers

Bruce as a manager at Capgnmini could

Code Camp on Agile Java Development / Group Anemoi; Petri, Sahar and Aidin

- add/edit/modify the activity types.
- view the workload forecast summary report in weekly, monthly or yearly basis.
- see estimated revenue in workload forecast report.
- access the history of workload forecast.

Directors

Maria as a director at Capgnmini could

- only read all workload forecast report, but could not modify/edit any data.
- access the history of workload forecast.

Controllers

Alice as a controller at Capgnmini could

- be responsible for maintenance of the whole system.
- add/edit/remove users groups.
- access the history of workload forecast.

Resources

Tom as a resourcing expert at Capgnmini could

- view the summary report but consultant could only see individual's workload forecast.
- see only the teams and consults he has privileges to view.
- see history and future workloads.
