# Fish

**Idea**

- Fishermen are very secretive about good fishing spots

- But they would like to store data about the catches and location to themselves...

- ... and maybe share them with a friend

# Qt Fish

**Features**

- Add catch information to database

- Check location of good fishing spots

- Save/load database from your own or friends server

# Fish

**Good**

- Qt

- Easy to make applications

- Signals and slots

**Bad**

- Setting up the development environment

- Three computers, three different outcomes

- Simulator

# Fish
