# Product

*Platform for listing work and project opportunities.*

*Targeted towards students of a specific field.*

*Streamlined with only the necessary features.*

*Secure and robust.*

*Customizable for different fields of study.*

# Value

- STUDENTS: Real life work and project opportunities
- COMPANIES: Recruitment targeting
- NGO'S & FIRMS: Proficient and enthusiastic developers for small projects

# Vision 2020

*Licensing for student associations  
and educational organizations*

# Current situation

- Back-end was already ready
- Client side “working”
- Some visual issues
- Missing multiple features

# Issues #1 - Visual

- Scalability & Grid system
  - ClearFix
- Cards are not looking that nice

## Issues #2 – Missing features

- Tabs for different types
  - Allows bookmarking & easier navigation
- Tagging cards (#summerjob, #react, #website)
- Control panel not React:
  - login, register & adding cards implemented in PHP.
- Search is case-sensitive and only for description

# Lessons learned

- React
  - Props: Changing value of props is not wise.  
*~~This.props.jobtype = "summerjob"~~*
- React-bootstrap
  - Quite handy. Lot of imports.
  - Remake of bootstrap3. v4 also available.
- Mapping, filtering & search
  - *if (filter[0] && jobtype === "1") {cards.push(card)}*
- Rendering & Fetch
  - Rendering retrieved objects before finishing fetch === trouble.
- Pair coding ftw

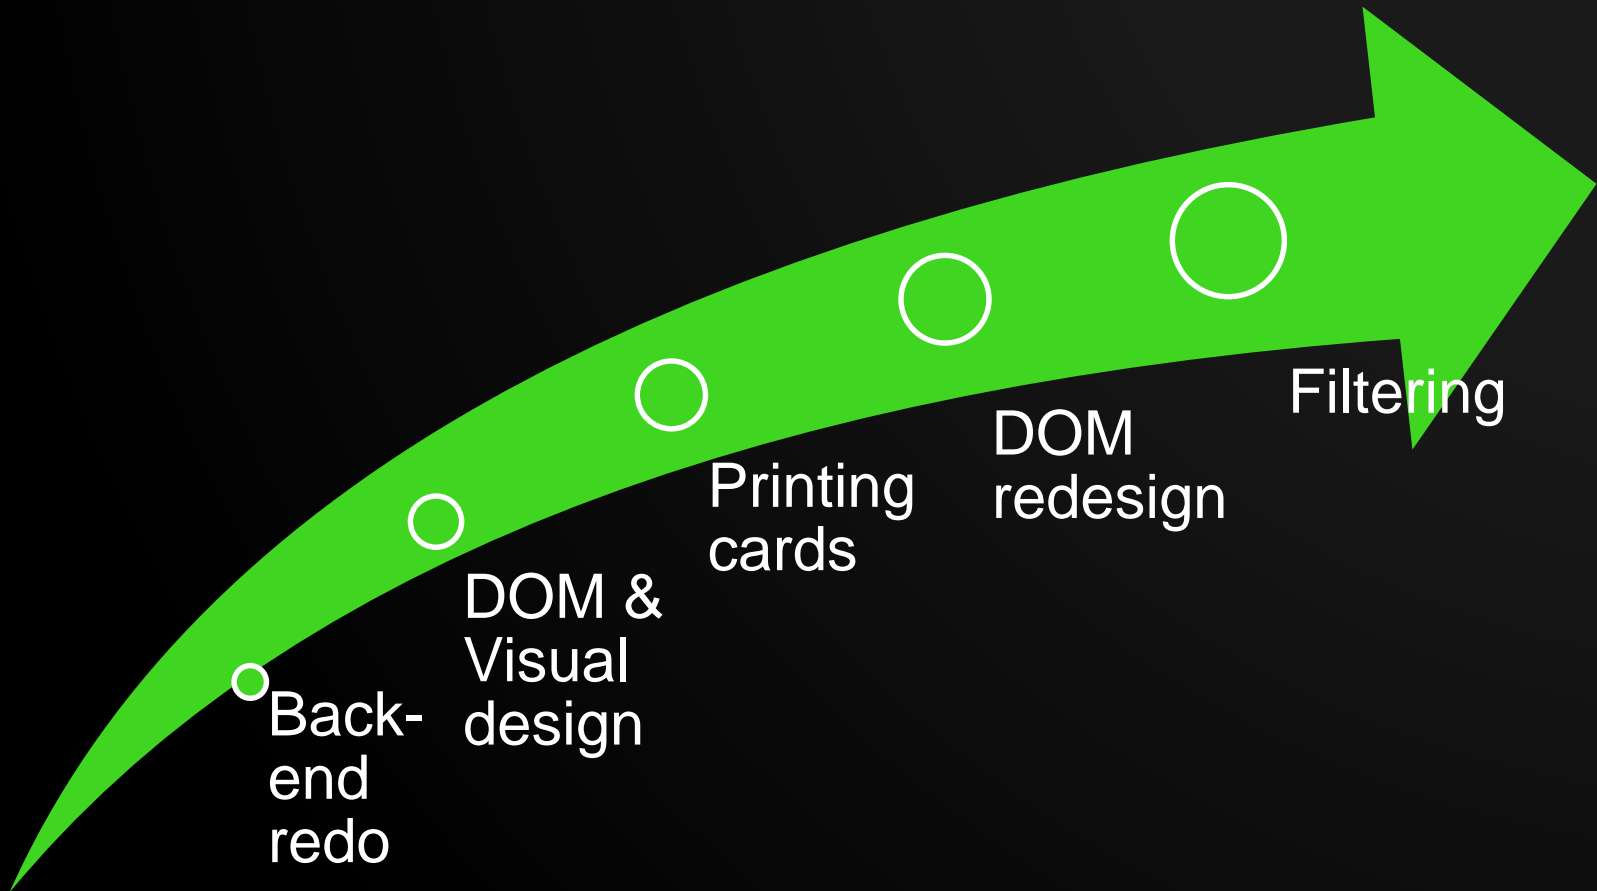

# Test it yourself!
